
django-graph-api Documentation

Release 0.1.0

Stephen Burrows, Arianne Dee

Oct 06, 2017

Contents:

1	Why Not Graphene?	3
1.1	Tutorial	3
2	Indices and tables	5

Django Graph API is an implementation of GraphQL in Python, designed to work with the Django web framework. The project began at DjangoCon US 2017.

CHAPTER 1

Why Not Graphene?

Graphene is the standard Python implementation of GraphQL, and it is far more mature than Django Graph API. So why should you use this project instead of Graphene?

- Django Graph API is Pythonic, while Graphene was ported over from Node.js and follows Javascript idioms.

Tutorial

todo: Create tutorial

CHAPTER 2

Indices and tables

- `genindex`
- `modindex`
- `search`
